SEES

DOOR LOCK MONITORING

HOW IT WORKS

The SEES DLM is designed to be code compliant to (A17.3-2020) 3.10.12

One of the most minimally invasive and easy to install systems on the market

Adds additional levels of redundancy to ensure a safer use of the elevator

Optically isolated full wave bridge input boards

24-120 VAC/DC power input

Part #: SEES-DLM-001

The SEES Door Lock Monitoring System was developed to enhance elevator passenger safety.

When properly overlaid with existing elevator controllers, the SEES DLM System prevents the elevator from operating (while on normal mode) with a malfunctioned contact. When properly installed, the SEES DLM allows elevators to meet all requirements of (A17.3 - 2020) 3.10.12
